## Pollinators of the Nature Trail

Pollinators help us bloom at The Nat! These amazing animals, including bees, flies, butterflies, bats, and hummingbirds, live and work in our gardens, transferring pollen to flowers, helping our gardens grow.

### Look!

Some plants use colors to attract pollinators. With a partner, find a flower or a picture of a flower and answer these questions:

- What is something you notice about the colors and shapes you see on the flower?
- Do you see any animals close to your flower? What are they doing?
- If you were a pollinator, which plants would you visit? Why?

### Draw!

Draw a pollinator or plant you saw today!

Did you know?  
San Diego is home to over  
650 species of native bees?

### Did you see us in the garden?

Did you see any of these animals, plants, or colors today? Circle any that you found.
